

Corsa Security Platform for Automating Firewall Virtualization

The Corsa Security Platform for Automating Firewall Virtualization helps large enterprises managed security service providers (MSSPs) and service providers (SPs) who struggle with network firewalls getting in the way of their business agility to automatically deploy and operate virtual firewalls. It is the first turnkey network security virtualization solution that deploys in minutes, offers pay-as-you-grow firewalling for significantly lower TCO, and easily scales firewall services when needed. It's a one-stop-solution for network owners that need speed, simplicity and savings from their network security.

Secure access secure edge (SASE) framework that evolves

SIMPLIFY THE VIRTUALIZATION OF HARDWARE FIREWALLS

Push button provisioning to deploy the service

Fully integrated with the firewall licensing and policy management

Managed through centralized Corsa Security Orchestrator

QUICKLY SCALE SECURITY SERVICES

Supports multi-tenancy

Offer specific services and capacity to individual tenants

Integrates with monitoring, policy, operations and other tools

REDUCE NETWORK OPERATIONS EXPENSES FOR BETTER ROI

Eliminates the need for DevOps skills

Low cost of entry

Pay-as-you-grow model

About Corsa Security

Corsa Security is the leader in scaling network security with the first turnkey network security virtualization platform that simplifies how large enterprises and service providers expand traffic inspection, increase threat protection and automate firewall virtualization, at much lower total cost of ownership (TCO). By tightly integrating virtualization with intelligent orchestration, Corsa Security streamlines deployment, management and migration of virtualized next generation firewalls (NGFW) for zero-touch network security operations. Customers subscribe to the Corsa Security services based on their current needs and then pay as they grow while never having to deal with the infrastructure.

How automating firewall virtualization works

The Corsa Security Platform for Automating Firewall Virtualization is built on a SASE framework to enable a fully virtualized network firewall service. Unlike complicated hardware deployments or do-it-yourself (DIY) virtualization projects, the platform offers zero touch operations for migrating physical firewalls to virtual ones with a pay-as-you-grow model. The platform includes the Corsa Security Orchestrator, hypervisor, and server delivered as a ready-to-deploy platform.
